## CURRICULUM VITAE

FIRST TWO PAGES ARE THE MOST IMPORTANT ONES

### PERSONAL STATEMENT

---

I learned to program throughout my career in Physics, mainly in topics of numerical analysis. However, I discovered areas such as deep learning and data analysis that soon caught my interest, so I decided to pursue a master's degree in computer science in the near future. I know how to use GNU / Linux systems and I have knowledge of several programming languages such as Python and C++. I have worked both in the academic field but also as a Data Scientist / Machine Learning Engineer, and I have a good understanding on algorithms and data structures.

## EXPERIENCE

---

### *Short Description*

**Jun 2020 - Present.** I am currently working as a Data Scientist I at Rackspace Technology.

**Dec 2019 - Jun 2020.** I worked on a face recognition system using a method called Sparse Representation alongside with Neural Networks. I acquired a deep understanding of Neural Networks for Face Detection and Recognition, Image Classification, Language Processing, among others. Also, I have some experience in Data Visualization tools such as Tableau.

**Sep 2019 - Dec 2019.** Data Scientist Trainee at Softtek. I learned about different statistical and machine learning techniques, as well as algorithms, to study a wide range of problems.

**2012 - 2019.** Throughout my career I have programmed, mainly in Python and C++, but also in Julia, Matlab, etc., for the subjects of Computational Physics and Selected Topics of Computational Physics. As mentioned below, I have taught Computer Science classes, in which the Python programming language was introduced to Physics students.

**2014 - 2015.** I helped in the administration of the Mechanical Laboratory of the Faculty of Engineering database, at the UNAM, solely with the objective of learning. SQL was used for this purpose.

**Sep 2018 - Dec 2019.** Regarding research, I have experience using the Einstein Toolkit, this being a software platform created with the aim of advancing and supporting research in relativistic astrophysics and gravitational physics. It allows the study of topics such as the collision of black holes, relativistic hydrodynamics, etc.
